BTECHBUDDY - DBMS Normalization Cheat Sheet

Rapid Revision Guide: Functional Dependencies to BCNF

Subject: CS301 | Database Management Systems | 5th Semester

Summary of Normal Forms:

1. 1NF: Atomic values only. No repeating groups or multi-valued attributes.
2. 2NF: Must be in 1NF + No Partial Dependency All non-prime attributes fully dependent on candidate key.
3. 3NF: Must be in 2NF + No Transitive Dependency X -> Y where X is super key or Y is prime attribute.
4. BCNF: Strictest form: For every functional dependency X -> Y, X MUST be a Super Key.

Armstrongs Axioms: Reflexivity, Augmentation, Transitivity.

Closure of Attribute Set: Algorithm to determine candidate keys in 30 seconds.

ACID Properties: Atomicity, Consistency, Isolation, Durability with recovery logs.
